

PROJECT CAPABILITIES

BOILER MACT TUNE-UPS AND ENERGY ASSESSMENTS

For many years, JANSEN has provided boiler tuning and energy assessment services, with an emphasis on reducing emissions, improving fuel burnout, and increasing thermal efficiency. With the introduction of the Boiler MACT regulations, boiler owners have been required to complete regular tune-ups and a one-time energy assessment. Many have turned to JANSEN to provide these services. Detailed and thorough execution of the required tune-ups and energy assessment often lead to operational improvements and identification of equipment modifications that reduce emissions and improve thermal performance.
